DataTypes in MongoDB

MongoDB supports various data types including string, integer, double, boolean, arrays, objects, dates, and null.

MongoDB

Let's practice

1. Download MongoDB Compass
2. Create a **Database**
3. Create a **Collection**
4. Create a **Document**

Check for understanding

1. What is an ObjectID?
2. What is the difference between Field, Document and Collection?
3. What values can a Boolean field take?
